

**Global Inspection Services** (GIS), as part of its commitment to the environment, in 2018 implemented an environmental management system, in accordance with the ISO 14001 standard.

That is why periodically identifies and evaluates the environmental aspects and impacts, as a consequence from its activity. Then objectives and indicators related to the environment are defined.

The environmental aspects that were significant in 2018 were related to consumption (electricity, water, diesel) and waste generation. Reduction targets were set for all of them.

Given the recent implementation of the environmental management system, it is not yet possible to carry out a detailed study of the environmental performance of GIS, as it does not have historical data. But only with the recycling of paper, implemented during this year, has it been possible to avoid:

- The felling of 1.26 trees
- The emission of 81 kg of CO<sub>2</sub>
- Consumption of 4.5 m<sup>3</sup> of water
- Occupation of 0.18 m<sup>3</sup> of landfill

At the end of 2019, in addition to providing data on the amount of paper recycled and its consequent environmental impact, it will be possible to report results related to:

- Paper consumption
- Energy consumption
- Water consumption
- Diesel consumption
